

ADDITIONAL EQUIPMENT

Inline Heater (ILH)

IDEALLY, THE CLEANING WATER TEMPERATURE SHOULD CONSTANTLY BE AROUND 45°C. IF NECESSARY, THE MUELLER INLINE HEATER HEATS UP THE CLEANING WATER DURING THE CLEANING PROCESS, TO ENSURE THE PERFECT TEMPERATURE AT ALL TIMES.

The Mueller ILH-System can easily be fitted in the cleaning water circuit >

ADVANTAGES INLINE HEATER:

- Heating element and casing are made of stainless steel 316 for optimal durability.
- High heating capacity of 9 kW to quickly heat the water.
- Universally adaptable due to its own power supply, which is also used for the internal electrical parts.
- The ILH-System is only activated when the water temperature is too low.
- Optimal communication with the cleaning control system to ensure a careful matching of the cleaning time and heating time.
- Dual protection against superheat.
- Security level set at the maximum running time of the circulation pump to protect the pump from superheat.
- CE-certified.
